ADDITIONAL EXPERIENCE

Projects

[Github.com/jb1361](https://github.com/jb1361)

- **UptimeRmx** (2019-Present). Remote monitoring software for PLC's that provide machine information through custom protocol. The protocol spec allows the system to monitor all information from any machine through a robust configuration; .NET Core; React
- **RaspSat** (2019). A Cubesat project powered by Raspberry Pi's; Python
- **Exaltor** (2018). Internal Dev Ops system. React; .NET Core MVC
- **3CX Wallboard** (2018). Application to retrieve data from 3CX database to present it in a meaningful way and run a daily report. Laravel
- **Open Angel Arena** (2017). Open source contribution to a mod for the game called Dota 2. (github.com/OpenAngelArena)
- **Kattis** (2017-2018). Tackle programming problems from previous ACM contests. Python; C++

Research

- **RS3 GE Prediction Model** (2017). I developed a model that predicts future prices of items in a game by collecting three months of data and running a linear regression algorithm to produce price predictions.
